

Techno Managers potential contribution to State/Nation development

Promoting mutual understanding and increasing interaction between the people of different states and UTs is one of the important objectives of Ek Bharat Shrestha Bharat. Such mutual understandings commence when a harmonious environment is created for participants to share their experiences, reflections, and realizations with others. Our students at NITIE shared their experiences, reflections, and realizations in English, Hindi, Marathi and Odiya language. With the intention of reciprocating reflections in many more languages, they presented their engineering values. We trust that the Ek Bharat Shrestha Bharat initiative would be even more productive and stronger by sharing reflections. Thus, the National Institute of Industrial Engineering students contributed their bit with the ideation of nation-building through their techno-managerial skills.

Realizing our potential and deciding our future creates opportunities to be independent and celebrate independence. While we conducted real events, we also celebrated Independence Day virtually with students who could not be physically present on the grounds of COVID-19 constraints. Thus, on the auspicious occasion of Independence Day, NITIE EBSB Club organized an event on “Techno Managers potential contribution to State/Nation development”.

We received entries from the students that were further collated and presented in a YouTube video. The video is attached along with this report. Please see the link at <https://youtu.be/ZPtW6akN0ns>

The video was also uploaded to the Institute’s social media handle. The students acknowledged that learning of supply chain, operations, production, and management can be extended in regional languages and could be used as a resource for the upliftment of society. Therefore, we invited volunteers who wished to work in this space and support us in our journey of creating an environment of sharing experiences, reflections, and realizations with others. In the future, we would continue with this activity to collate realizations in several Indian languages that would foster the integration of techno-managers in the various facets of societal and community development.
